- 1. Install CMB.
- 2. Make sure you have *gettext* and *python-docutils* software packages installed. For example *:

```
# apt-get install gettext
...
# apt-get install python-docutils
...
```

3. Go to CMB's django directory:

```
# cd /usr/local/share/cmbarter/cmbarter/
```

Further in this manual "es" is used as an example language code. You should replace "es" with your language code everywhere!

4. Generate a .po file for your language:

```
# django-admin makemessages -1 es
```

The .po file will be created at ./locale/YOUR_LANGUAGE_CODE/LC_MESSAGES/

- 5. Translate all the messages in the .po file. You may use Gtranslator or KBabel to do this.
- 6. Compile your .po file to a message catalog (.mo) file:

```
# django-admin compilemessages -1 es
```

- 7. Make a copy of the ../doc/en/directory to ../doc/YOUR_LANGUAGE_CODE/.
- 8. Translate the ../doc/YOUR_LANGUAGE_CODE/rst/cmb-manual.txt file in your language. You should pay attention not to violate the reStructuredText formatting rules!
- 9. Use the *rst2html* command line tool to create a HTML (with server side includes) version of the manual:

```
# cd ../doc/es/
# rst2html --stylesheet=../css/index.css rst/cmb-manual.txt --template=\
../css/template.txt index.shtml
```

- 10. Add your language to the "LANGUAGES" list in the /usr/local/share/cmbarter/settings.py configuration file.
- 11. Run your CMB application server with the newly created translation.
- 12. Set the user interface to your language, sign up, and see if everything is translated correctly. If you find some problems, go back and improve your translation.

- 13. Reproduce the usage scenario described in the examples at the manual. Take the same screen-shots in your language. Use the *GIMP* files in the *gimpfiles* directory to create similar to the original diagrams. Copy the translated diagrams at *doc/YOUR_LANGUAGE_CODE/diagrams/*. Make sure the names of the files remain the same.
- 14. Copy the "circular trade" diagram from doc/YOUR_LANGUAGE_CODE/diagrams/circular-trade.jpg to static/circular-trade-YOUR_LANGUAGE_CODE.jpg.
- 15. Do not forget to contribute your translation back to the CMB project!

* The example given here is for *Debian*. If you use another operating system, the exact commands that do the work might be different.
